# ASSEMBLY INSTRUCTIONS

## MODEL I-175 SCRAPER

1. A suitable hoist should be available for assembly.
2. Install 20.5 x 25 rim mounted tires to rear hubs.
3. Install gooseneck frame to bowl and frame assembly with two A10152A pins, frame attach.
4. Install 15.5 x 25 rim mounted tires to pole and axle assembly.
5. Raise the front frame and remove the two 3/4" x 4-1/2" bolts which hold the cast socket halves inside the gooseneck post and remove the socket halves.
6. Roll the pole and axle under the gooseneck and place the cast socket halves around the ball swivel on the axle, with the socket half with the threaded hole towards the front. Lower the frame into place so that the socket halves seat into the gooseneck. (If necessary, clamp halves together with a C-clamp while lowering the gooseneck.) Replace the two 3/4" x 4-1/2" bolts and tighten securely install A2206 long shank grease fitting into the threaded hole.
7. Raise the bowl by the front cross member tube, high enough to install two A10153 transport lock pins with the hair pin clips. Lower the bowl until the ears rest on the lock pins.
8. Install apron to bowl with two 1-1/2" x 6" NF grade 8 bolts and two 1-1/2" NF self lock nuts.
9. Connect apron cylinders to apron arms with a A10167 pin and cotter pin.
10. Install lift cylinders, connect the base to the gooseneck frame and the rod end to the bowl frame using two A6007A square head pins and 1/4" x 2" bolts.
11. Install four 3/4" bulkhead unions thru bulkhead plate with lock nuts on the front side of the plate. Connect two A101H32, 3/4" x 21" long hoses to the two 3/4" elbows on top of the front crossmember and to the two bottom bulkhead unions. (These two lines are to be connected to the same spool on the control valve on the tractor. ) Refer to Pages 17 and 18 in the parts manual.
12. Connect two 3/4" x 25-1/2" hose to the two 3/4" inch tees on the front crossmember and to the two top bulkhead unions. (These two lines are to be connected to the spool on the control valve on the tractor.

13. Connect two A45H06 1/2" x 24" hoses to the two lift cylinder bases. Connect two A140H16 1/2" x 33" hoses from the cylinder rod ends to the two most rearward 1/2" elbows on front crossmember which is one common line. Connect the two hoses from the cylinder base ends to the two remaining 1/2" elbows which is also on common line.

14. Remove the dirt shield from the left side of the scraper and remove and discard the hex plug installed in the 3/4" elbow. Connect one end of the A101H42 3/4" straight adapter on the front frame. Reinstall dirt shield.

15. Remove and discard the hex plug from the 3/4" elbow located on right side of the scraper behind the apron cylinder. Connect one end of the A101H36 3/4" x 33" long straight adapter on the front frame. Install the dirt shield.

Care should be taken to make sure all plastic plugs are removed from all hoses and fittings and no dirt is allowed into the hydraulic circuit.

## **HOW TO ORDER PARTS:**

### **IMPORTANT**

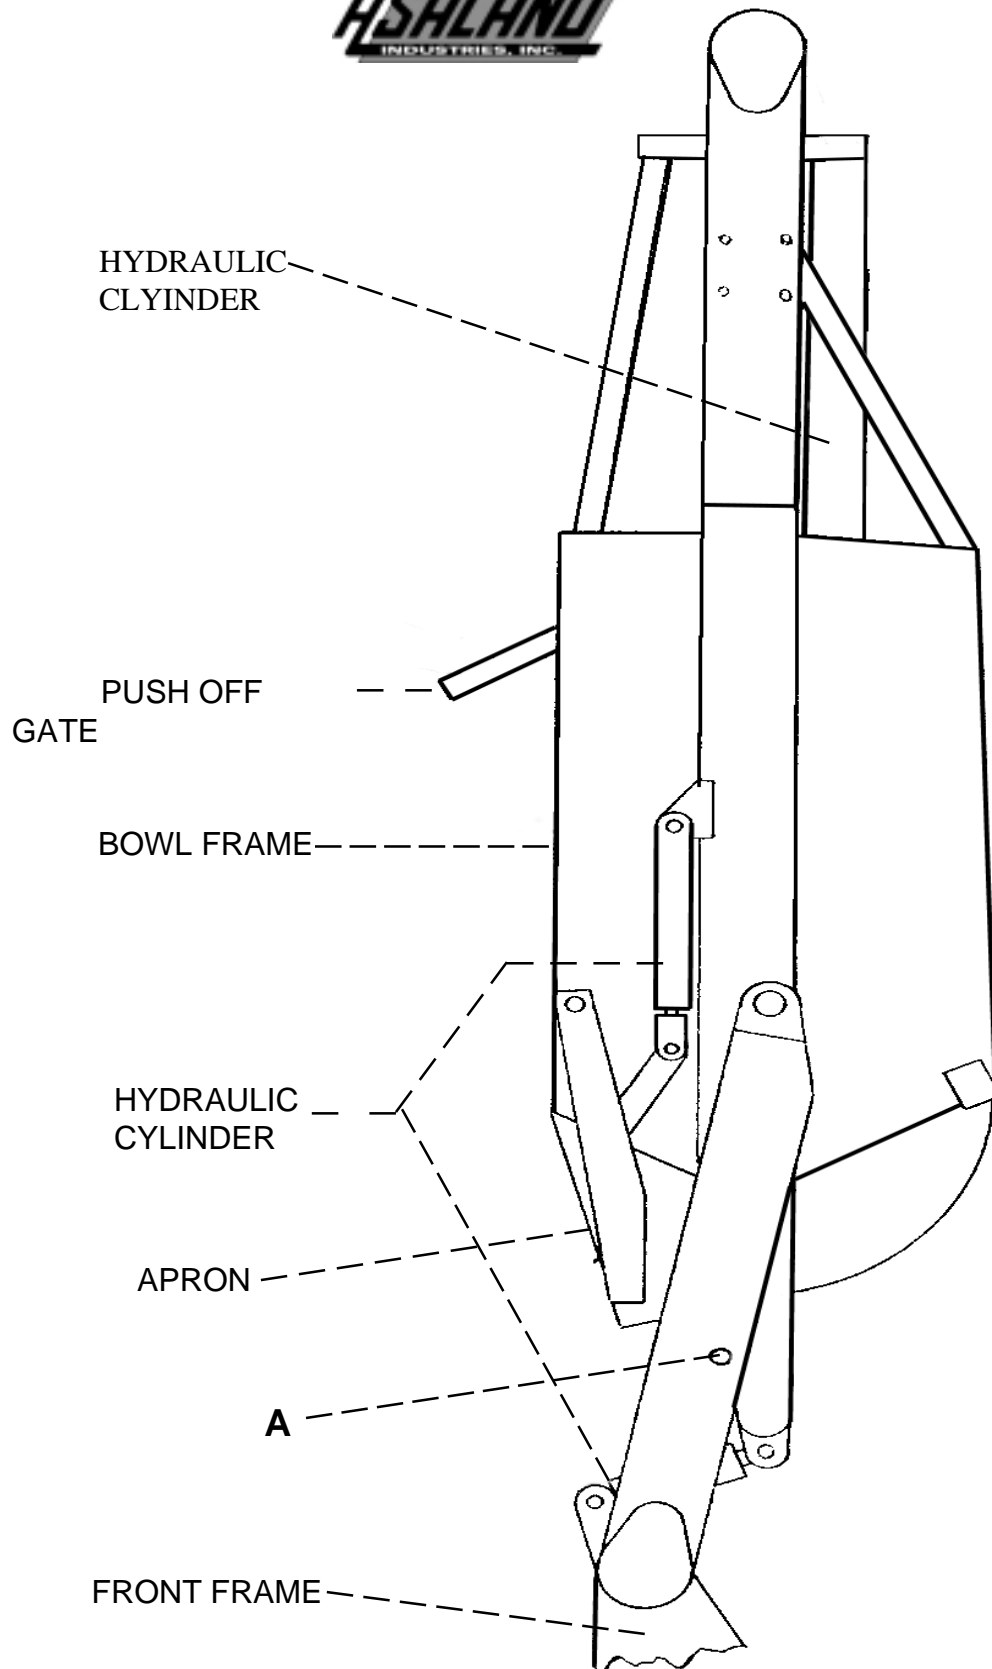

Be sure to state Model and Serial Number of your machine, part number, description and quantity needed.

Unless this is done, we cannot provide prompt service or assure shipment of correct parts.

# OPERATORS AND MAINTENANCE INSTRUCTIONS

The scraper is a durable piece of equipment and with proper care will yield many years of trouble free operation. The scraper requires a power source with TWO 4 way (double acting) hydraulic control valves.

The scraper should be greased at all points where grease fittings are provided. Connect hydraulic hoses to the tractor and retract lift cylinders to remove transport lock pins (point A), then extend and retract all cylinders several times to force out any air from the hydraulic cylinders and lines. Check the oil levels in the tractor hydraulic system and add to maintain the proper level. Care should be used when adding oil or when disconnecting any oil line to keep all dirt out of the oil as dirt is a major factor in the failure of hydraulic components.

When the scraper is placed into operation, the operator will have to “feel out” the amount of depth of cut to obtain maximum loading efficiency. This is usually accomplished by taking a lesser and more uniform cut. However, some soil conditions such as loose sand may require a “pumping action” obtained by taking successive deep cuts and lifting out of cut as the tractor begins to lose power or traction.

1. After 10 hours work, all bolts should be checked and tightened if necessary.
2. Every 10 hours all grease fittings should be lubricated.
3. After 50 hours work, all bolts should be rechecked and tightened if necessary. Check wheel bearings and adjust if necessary.
4. After 300 hours work, clean and repack wheel bearings and replace, if necessary, cutting edges, worn pins, etc.

## COUNTERBALANCE VALVE

PURPOSE of the counterbalance valve is to prevent the front gate from closing before the rear pushgate is fully retracted when the scraper is empty. This enables the operator to start the next cut without having to reopen the gate from the closed position.

INSTRUCTIONS for establishing counterbalance valve setting:

When properly adjusted, the front gate will close 58% from full open position (26-1/2" from bottom of gate to cutting edge) and hold at that position until the rear pushgate is fully retracted. If the front gate is closing more than 58%, remove the acorn cap nut and turn the adjusting screw clockwise until the front gate holds at that position. Turn an additional 1/4 turn clockwise, then tighten the lock nut. DO NOT turn the adjusting screw more than is necessary to hold the front gate at 58% open.
